

SINGLE LINE EDITING discussed by Jim Dunson on page 69, prompted Stan Kendall to submit his approach:

```
FOR Z= A TO B  
LIST Z,1  
GOSUB 3900; CLEAR; NEXT Z  
3900 CY = -36; PRINT "PRESS KP TO RETURN"; IF KP  
RETURN
```

A and B are the start and end line numbers. The program will list each line number and wait. The screen clears and the next line is shown. The 3900 is some line number away from the general program.

By the way, the variable that is identified in the third line of Jim's input on page 69 is N, which didn't reproduce too well, I've been told.
